

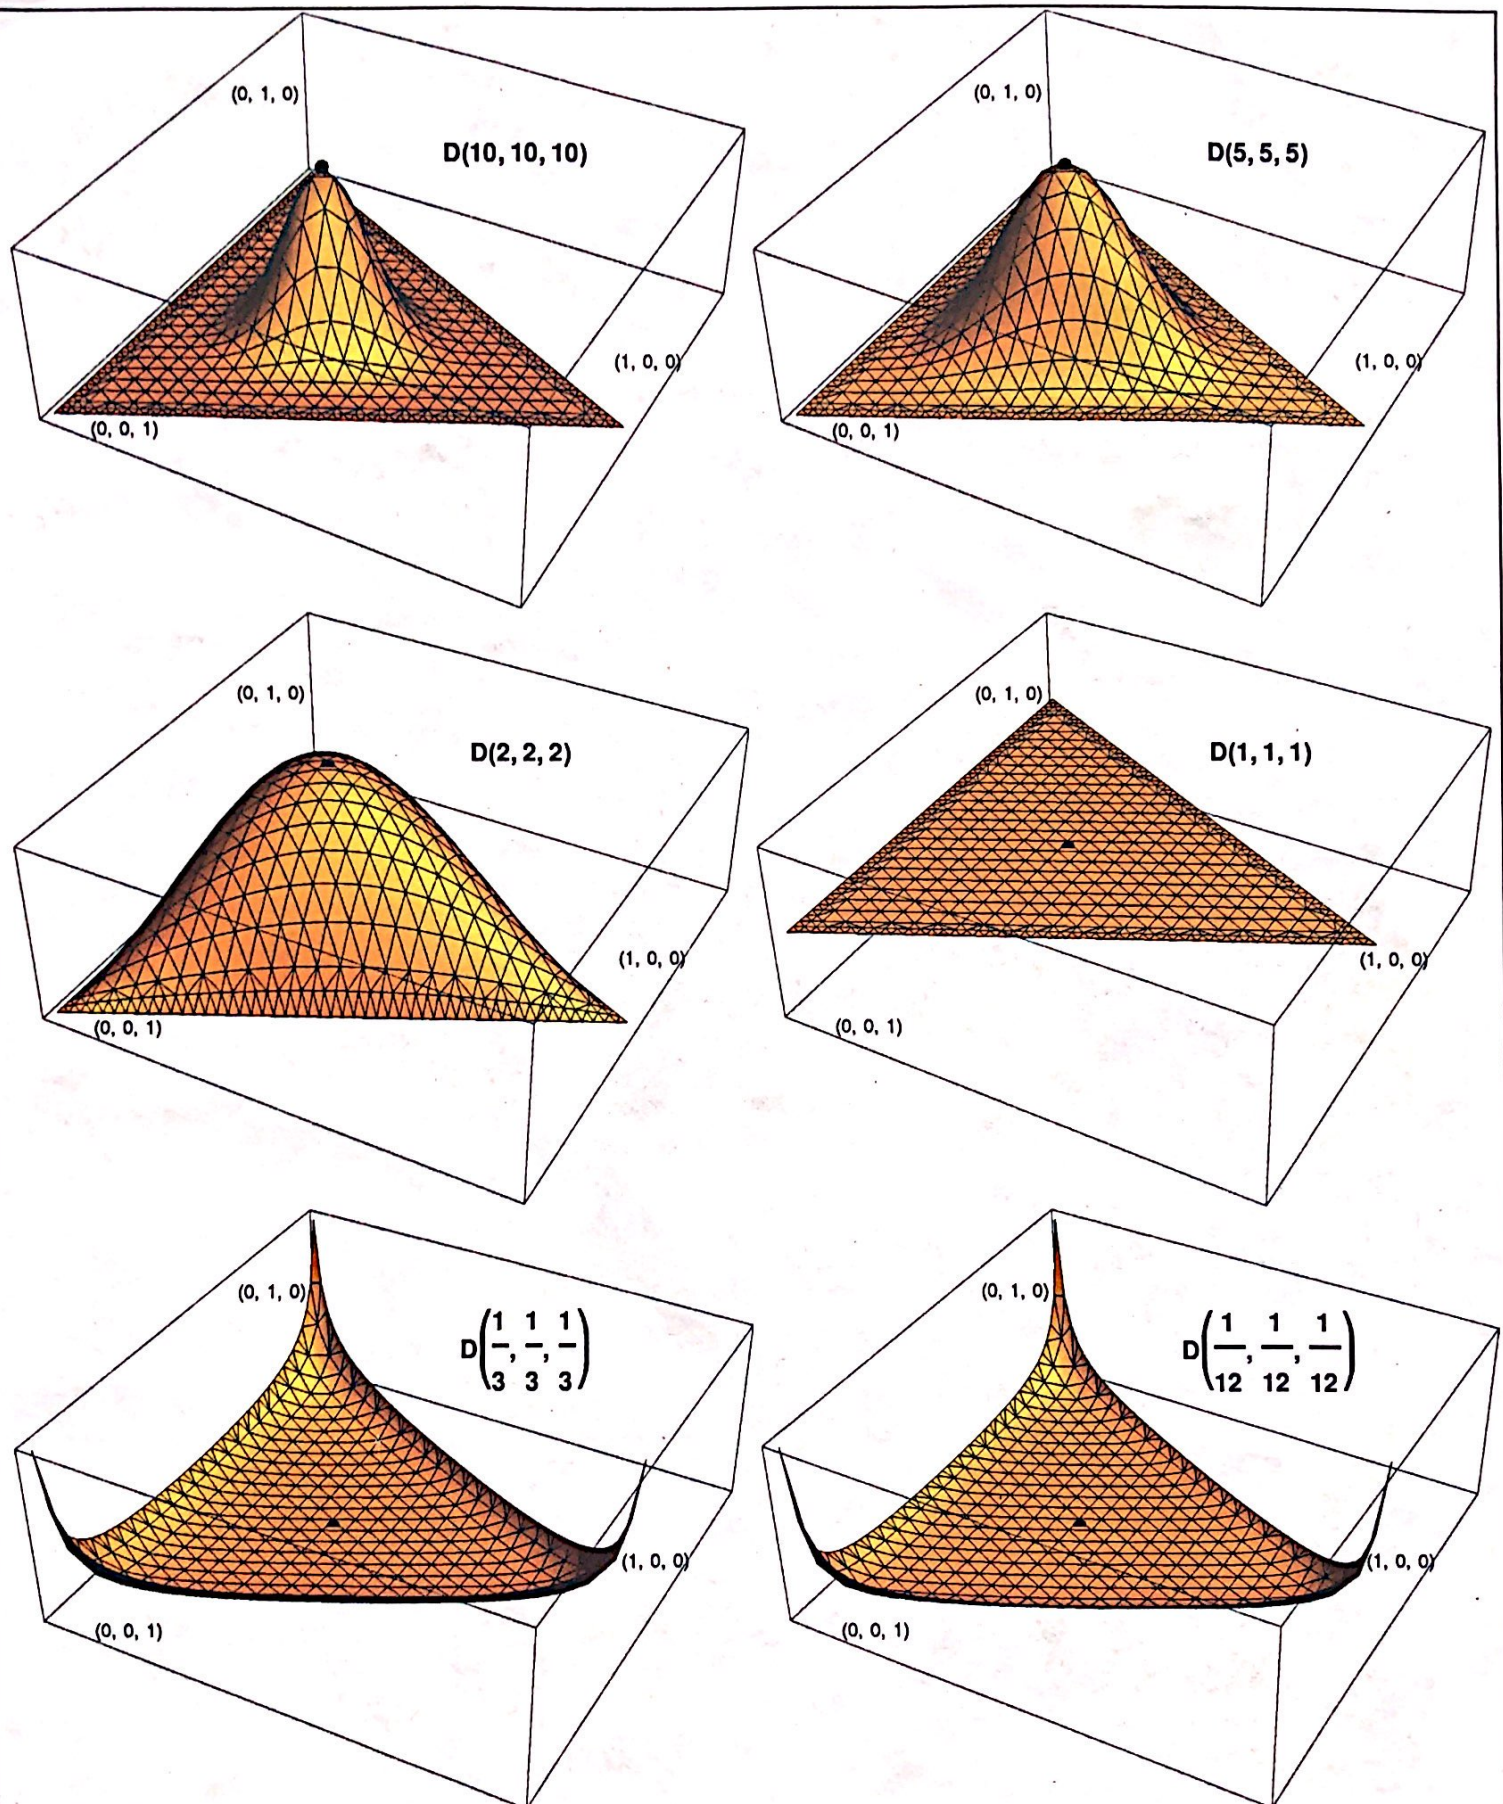

Figure 2. Densities of symmetric 3-component Dirichlets, illustrating how shape changes with concentration. In each case, the mean is $(1/3, 1/3, 1/3)$ (shown with a dot). (Simplex vertices are labeled nearby; vertical scaling varies by plot, precluding comparison of density values across plots.)

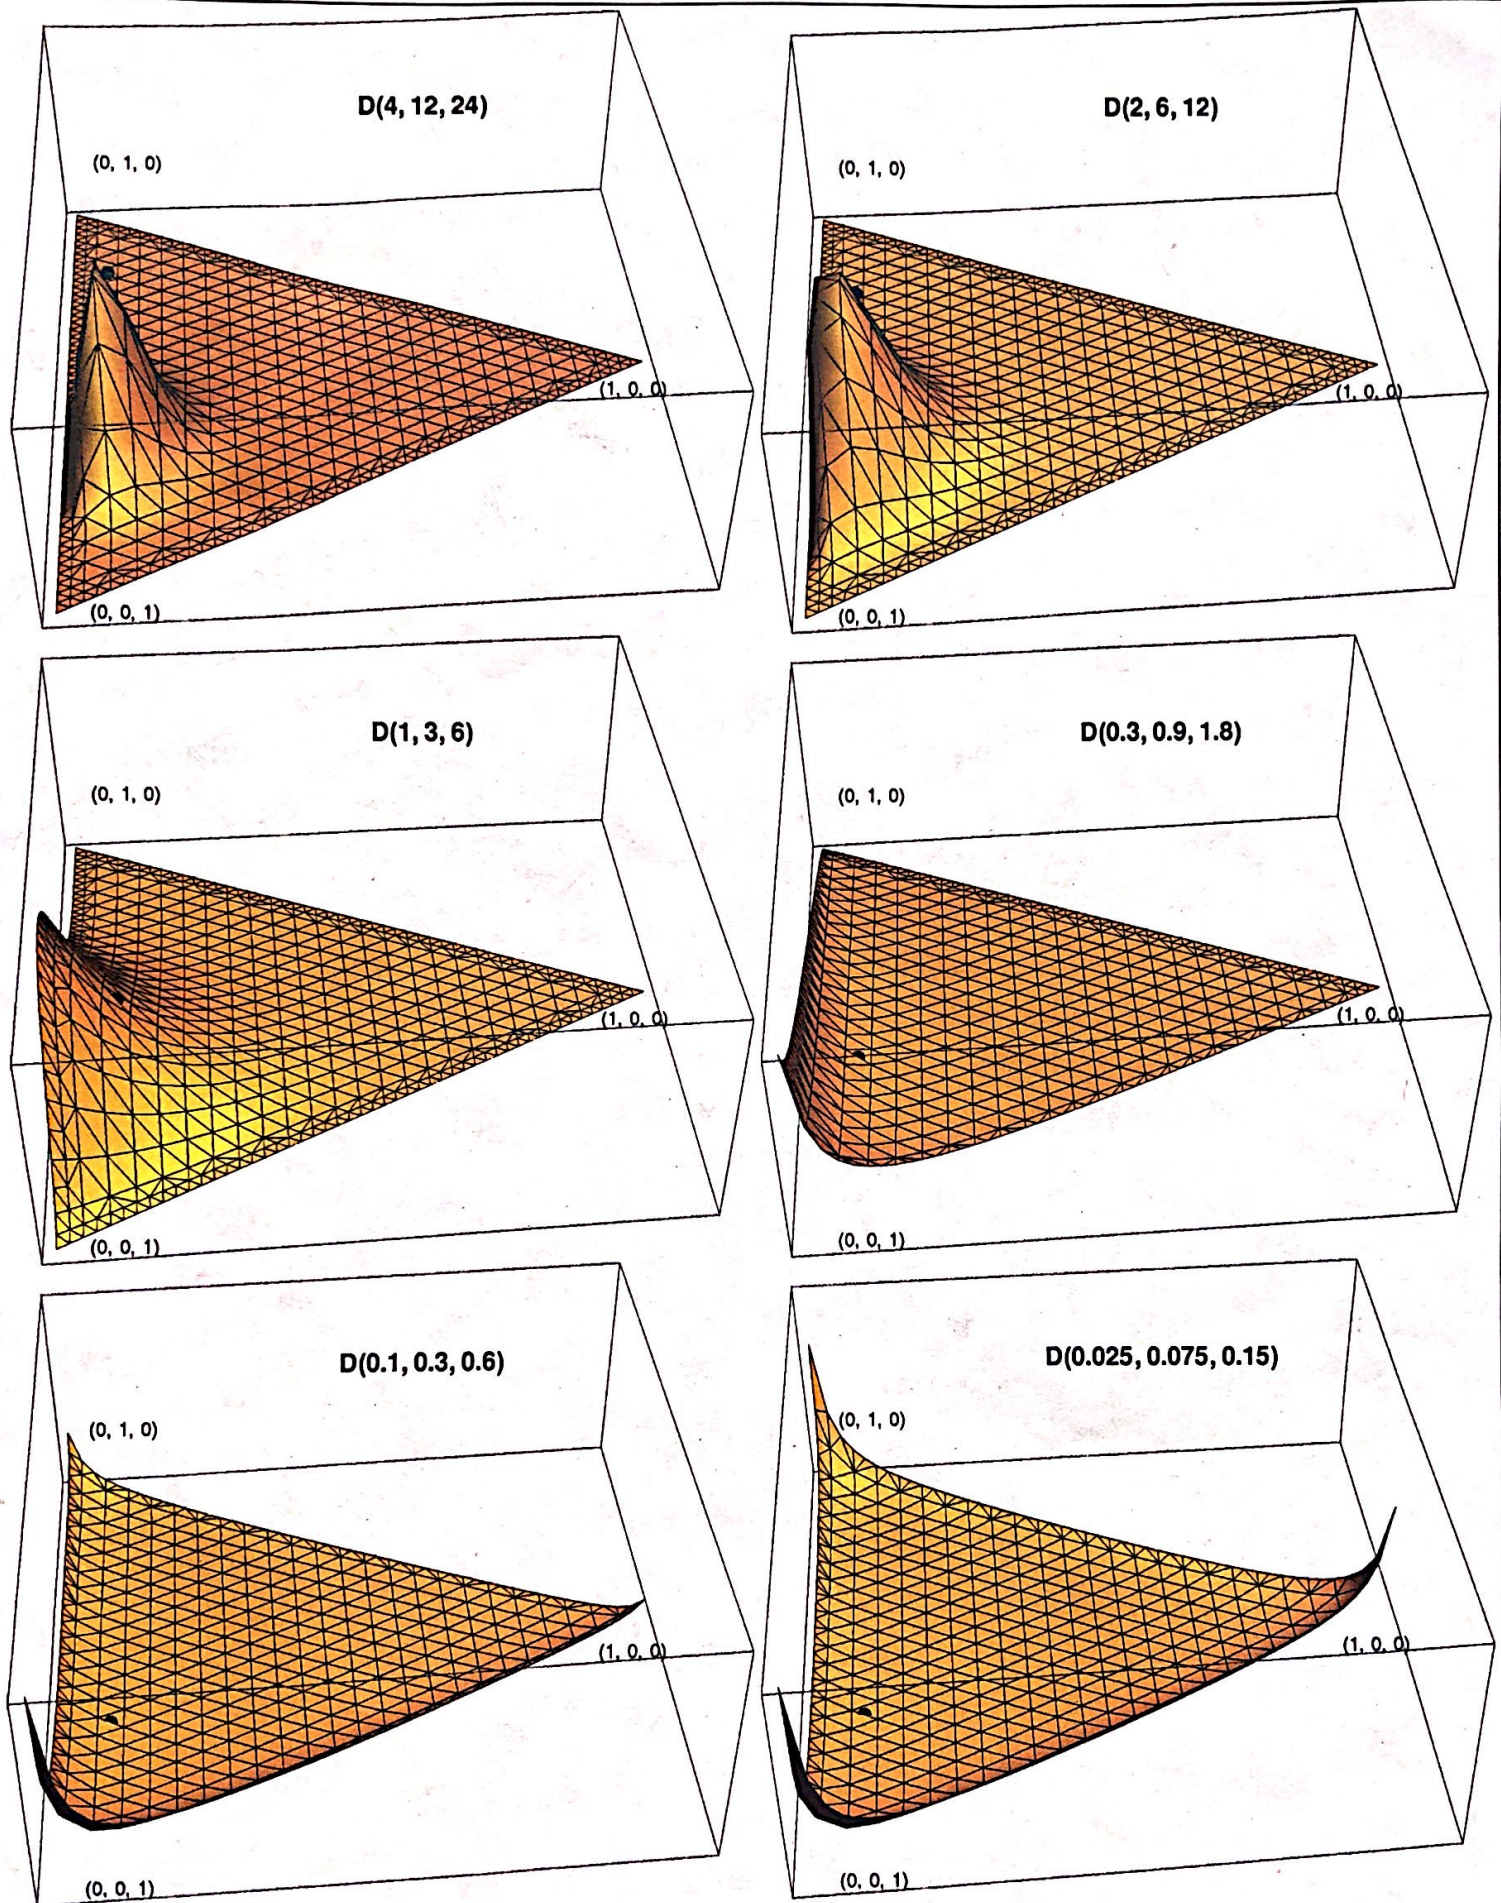

Figure 3. Densities of asymmetric 3-component Dirichlets; in each case, the mean is $(0.1, 0.3, 0.6)$ (shown with a dot). (Vertical scaling varies by plot.)
